## 2011 Report on New Jersey Consumer Intentions

## A slow-growing economy keeps New Jerseyans guarded about 2011 prospects

According to the annual consumer survey by Fairleigh Dickinson University's Silberman College of Business, 25\% of New Jerseyans say they are better off financially than they were a year ago, a figure up 7 percentage points from a year ago. Nearly half (48\%) say they are worse off financially, but that is a 6-point decline from a year ago.
While there is improvement over last year in every income bracket, only in the highest bracket do those who say they are better off outweigh those who say they're worse off. Two in five (40\%) of those with household incomes over \$150,000 say they're better off, while just one in four (26\%) in that income bracket say they're worse off. In the lowest bracket, earning under \$50,000 a year, 23\% say they're better off financially than a year ago, a gain of 8 percentage points over last year, while more than half, $55 \%$, say they're worse off, a decline of 7 points from a year ago.
"It's the norm that those with the most income emerge from a recession first and most everyone trails them," said Sorin Tuluca, professor of finance at the Silberman College of Business.

While fewer Garden Staters say they're worse off and more say they are better off, their optimism is consistent: $46 \%$ say their financial well-being in the next 12 months will improve, compared to just $27 \%$ who think they will be worse off by year's end. In the survey a year ago, $48 \%$ thought that they would be better off by the start of 2011 and $23 \%$ thought that they would be worse off. The reality, though, was that at the end of 2010 only $25 \%$ claimed to be better off while $48 \%$ were worse off.
"A year ago New Jerseyans were quite optimistic as they had the feeling that the worst was over," said Tuluca. "The reality is that the worst is over but the road ahead will continue to be a steep climb."
Similarly, while only one in four ( $25 \%$ ) say business conditions in the state have improved since a year ago, that is an increase of 12 points over a year ago. And while a majority (56\%) say business conditions are worse, that is an improvement from $71 \%$ a year ago.

Looking to the future, New Jerseyans are bullish about prospects for business in the state: $54 \%$ say that business conditions will improve in the next 12 months while half that, $26 \%$, say business will be worse off. But reflecting a stubborn unemployment percentage at the national and state level, $65 \%$ of New Jerseyans still report that either they or someone in their family or a friend has lost their job, essentially unchanged from $67 \%$ one year ago.
"Unemployment certainly leaves a scar when it's you or a friend," said Tuluca, "yet as a statistic it lags behind other indicators. Even a little improvement in unemployment is good news. The upward trend is just not as quick as we would like, and many jobs will never come back."

Other notable results of the survey:

- $30 \%$ continue to be "somewhat worried" or "very worried" that they might lose their job this coming year.
- $35 \%$ say it is "somewhat" or "very difficult" to make payments on their credit cards, up from 33\% a year ago, 31\% two years ago, and 25\% three years ago.
- Given a windfall of $\$ 1,000,36 \%$ would save it, $12 \%$ would spend it, $45 \%$ would pay their bills and $4 \%$ would give it to charity. A majority (56\%) of those making less than $\$ 50,000$ would use it to pay bills. A majority (51\%) of those making over \$150,000 would save it.
- $49 \%$ think housing prices will rise in 2011, a decline from $56 \%$ a year ago, while $30 \%$ say prices will decline further, up from $26 \%$ last year.
What folks say they will purchase in the coming year has not increased over last year, and in many cases suggests a decrease. However, over the past year consumers tended to over-perform, that is, they spent more than they said they would. "All things considered, people are uncertain, and uncertainty leads to caution," said Tuluca. "Consumers were cautious last year, but found themselves in some cases a little more secure, a little less worried about losing their jobs, and purchasing more."

The composite Index of New Jersey Consumer Intentions- what New Jersey consumers think they will do on a theoretical scale of 0 to 100 - is 39 , down from 42 a year ago and unchanged from 2009. The composite Index of New Jersey Consumer Performance - what consumers actually did in the past year - is 31, up from 28 a year ago and 24 the previous year, but well below its high of 43 in 2005.
"Consumers hope that all this is going to be over quickly," said Tuluca. "Unfortunately that won't be the case. The economy will take a while to heal."

The telephone survey of 809 randomly selected adults throughout New Jersey who participate in their household's financial decisions is sponsored by the Silberman College of Business at Fairleigh Dickinson University. It was conducted by PublicMind from Jan. 3 through Jan. 9 and has a margin of error of $+/-3.5 \%$ percentage points.

Methodology, questions and tables are available on the Web at: http://publicmind.fdu.edu
Radio actuality line: (201) 692-2846.
For more information, please call (201) 692-7032.

Patch.com, as a complement to the FDU poll, also asked New Jersey residents in several communities if they think they're personally better or worse off than a year ago, and whether they think they'll be better or worse off a year from now.

## Methodology, Questions, and Tables

The most recent consumer poll by Fairleigh Dickinson University's PublicMind was commissioned by the Silberman College of Business and conducted by telephone, both landlines and cell phones, from Jan. 3 through Jan. 9 using a randomly selected sample of 809 adults statewide (aged 18 and over) who report that they participate in financial decisions in their household. The sampling error for 809 randomly selected respondents is $+/-3.5$ percentage points at the 95 percent level of confidence. Survey results are also subject to non-sampling error. This kind of error, which cannot be measured, arises from a number of factors including, but not limited to, non-response (eligible individuals refusing to be interviewed), question wording, the order in which questions are asked, and variations among interviewers. Interviews were conducted by professionally trained interviewers using a CATI (Computer Assisted Telephone Interviewing) system. Random selection is achieved through computerized randomdigit dialing. This technique gives every person with a land line (including those with unlisted numbers) an equal chance of being selected. Landline households are supplemented with a separate, randomly selected sample of cell-phone-only households, interviewed in the same time frame. The total combined sample is mathematically weighted to match known demographics of age, race and gender.

Expected Purchases in 2011

| 2005 Consumer <br> Performance | 43 | 47 | 41 | 44 | 47 | 42 | 38 |
| 2004 Consumer Intentions | 42 | 44 | 40 | 52 | 49 | 45 | 40 |
| 2004 Consumer <br> Performance | 41 | 44 | 39 | 42 | 43 | 42 | 35 |
| 2003 Consumer Intentions | 42 |  |  |  |  |  |  |
| 2003 Consumer Performance | 33 |  |  |  |  |  |  |

*The Index of Consumer Performance is one composite number of consumer behavior over the past year. By contrast, the Index of Consumer Intentions is a composite number of what consumers intend to do in the coming year. Each number is based on a series of questions about the economy, personal finance, and purchases. Responses about the direction of the economy and personal finances account for $40 \%$ of the composite. Consumer intentions regarding a variety of major expenditures over the past and coming year make up $50 \%$ of the index. And $10 \%$ of the composite number is a reflection of consumers' comfort with personal debt. The scale can theoretically vary from 0 to 100.
